Urban transport systems relying on fossil fuels consume enormous amounts of energy, suffer from health problems triggered by exhaust fumes and noise. Traffic jams waste time and money, and many people are unable to move around everywhere with ease and safety. A city is more civilised not when it has highways, but when a child on a tricycle is able to move about everywhere with safety. "(Enrique Peñalosa)"

"A city is more civilised not when it has highways, but when a child on a tricycle is able to move about everywhere with ease and safety." (Enrique Peñalosa)

Our approach to urban mobility can be described in a few short words: Moving people, not cars! The goal is to foster those modes of transport which are environmentally, economically, socially and humanely sustainable: Public transport, walking and cycling. The Sustainable Urban Transport Project (SUTP) hosted by GIZ on behalf of the Federal Ministry for Economic Cooperation and Development supports partner countries and cities in establishing sound policies for sustainable urban mobility, and in implementing concrete measures such as Bus Rapid Transit schemes, cycling networks or Transportation Demand Management (TDM) projects.

This poster shows selected sustainable urban transport policies and measures which have been identified as best practices. The documents are available on www.sutp.org
